

DAMAGE MITIGATION & RECOUP

Maximising Stock Utilisation

AI GENERATED

THE PRINCIPLE

In-depot damage often leads to unnecessary write-offs of perfectly sellable stock. When a case is damaged, the immediate assumption is that the whole quantity must be discarded. Our audit teams identify recoverable stock within those damaged cases and confirm that only true waste leaves your inventory. We reduce loss, cut disposal costs and make more of the stock you already hold.

We treat every damage claim as a potential recovery. Our teams examine cases flagged as damaged and separate the items that can still be sold or repacked. That reduces your waste management burden and protects the margin on every case that can be salvaged.

Beyond the immediate saving, our audits provide feedback you can act on. We establish whether the damage is accidental or process-driven, occurring on a particular conveyor, at a particular handover or during a particular handling procedure. That turns the damages process from a cost centre into a source of improvement.

THE PROVISION

Do not let manageable damage become a total loss. RAS Supply Chain Integrity provides the expert intervention needed to safeguard stock and reduce avoidable waste costs.

- **Proactive Auditing:** Skilled audit teams conduct in-depot checks to determine if items within a damaged case remain viable for sale or recoup.
- **Loss Reduction:** Prevents the premature disposal of stock, significantly reducing total waste costs.
- **Root-Cause Focus:** Identifies if damage is accidental or process-driven, providing the data needed to change handling procedures at the source.
- **Waste Efficiency:** Ensures that your waste management spend is focused on genuine, non-recoverable items.
- **Process Improvement:** Real-time feedback loop via RAS Prosper™ identifies specific lines or equipment causing recurring damage, enabling preventative maintenance and training.

KEY BENEFITS

- **Direct Margin Savings:** Recoups value from stock that would otherwise be discarded.
- **Waste Management Cost Control:** Reduces disposal volumes and associated costs.
- **Handling Improvement:** Prevents future damage by identifying recurring process failures.
- **Accountability:** Shifts damage management from an administrative burden to a value-protection activity.

**“Damage is rarely absolute.
If you don’t recoup, you are paying for waste that didn’t need to happen.”**
